

Uganda (Urban)

2003 Fact Sheet

The **2003 Uganda (Urban) GSHS** measured alcohol and other drug use; sexual behaviors that contribute to HIV infection, other STI, and unintended pregnancy; unintentional injuries and violence; hygiene; dietary behaviors and overweight; physical activity; tobacco use; mental health; and protective factors.

The 2003 Uganda (Urban) GSHS was a school-based survey of students in standards 1, 2, and 3. A two-stage cluster sample design was used to produce data representative of all students in standards 1, 2, and 3 in Uganda (Urban). At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 88%, the student response rate was 80%, and the overall response rate was 70%. A total of 1,709 students participated in the Uganda (Urban) GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13-15 years are included in the analyses for this fact sheet.
